DATA CENTER

The data center is the department in an enterprise that houses and maintains back-end information technology (IT) systems, data stores, its mainframes servers and databases. In the large, centralized IT operations, this department and all the systems resided in one physical place, hence the name data center Cairns Technology Group understands that choosing the right location for your IT infrastructure is critical to grow your business by shortening the distance between your applications or data and your end-users. we assist you to significantly lower latency and increase application performance, maximizing your ability to respond to business needs as well as to attract and retain customers.

IPTV

IPTV uses an Internet Protocol over broadband connection and very often this service has been provided in parallel with the internet connection of the subscriber, supplied by an operator dealing with broadband. We can describe it as a system in which a digital television service is provided to subscribing consumers over a broadband connection using the internet protocol.

SMATV

Secure Track can offer a full design, installation and maintenance service for SMATV systems. Our SMATV gives you the ability to receive programs directly from a satellite. We provide most of the satellite channels, Radio Channels and customized channels as per the customer requirements. The major industries using our SMATV service are as follows:- (Hotels,Residential Clinics and Educational Institutions.)
